**Early Mathematics Teaching Reflection and Feedback Prompts**

**Reflection**
After trying your new practice, reflect on the following questions. You may have tried it multiple times, you can pick one of the times, or reflect on the whole thing if you have time.

**Reflecting on what happened:**
- Describe one example of when you tried your strategy.
- What did you say/do?
- What did the child/children you were with say/do in response?
- Did you think this was effective? Why or why not?

**Reflecting for future practice:**
- What did you learn from watching this interaction?
- What is one thing you will do differently/do to build on your success the next time you try this strategy?
- How do you think this (above) will change the child’s/children’s response?

**Feedback**
If you observed someone else implement a new mathematical practice, you can talk with them about the above questions and/or provide feedback using the following feedback starters.
- You really got it when you…
- I noticed that you did …, that really worked well for engaging the children in mathematical thinking.
- It was great to see…
- I saw you do…, it was a perfect example of…
- I noticed a missed opportunity when…, next time I’d recommend…
