# Tacx

Tacx smart trainers use a quick release axle only. Due to the FOCUS R.A.T. axle, you have to exchange the R.A.T. Evo Insert on the right side of the dropout with a FOCUS threat thru-axle nut. You can order it through your local FOCUS dealer (article code: KD325919160).

## YOU JUST NEED THE FOLLOWING PARTS TO GET YOUR FOCUS BIKE ON A TACX TRAINER:

1. Tools: 15 mm wrench and a 2.5 mm Allen key.
2. TACX parts (like thru-axle and a, b, c, d) are most likely included in the delivery of the trainer.
3. Extra parts: FOCUS thru-axle nut, article code: KD325919160.

1. Take the R.A.T. Evo Insert off.

2. Assemble the FOCUS threat thru-axle nut (3).

3. Tighten the spacer sleeve (2a) on the drive-side.

4. Tighten the spacer sleeve (2b) on the non-drive-side. Now your trainer is ready for the frame.

5. Stick in the sleeve (2c) on the non-drive-side through the dropout.

6. Screw the threat sleeve (2d) through the FOCUS threat thru-axle nut on the drive-side.

7. Tighten the TACX quick-release axle by hand until it is tight.

8. Do not fold the lever, just tighten the axle.

WAHOO smart trainers are working with all standard thru-axles. You can use your standard FOCUS R.A.T. thru-axle.

#### ALL YOU NEED TO GET YOUR FOCUS BIKE ON A WAHOO TRAINER:

1. WAHOO parts are included with your trainer.

1. Fit in the spacer sleeve (1a) on the drive-side.

2. Spacer sleeve (1b) is ready for two installation widths (142/148 mm).

3. Fit in the spacer sleeve (1b) on the non-drive-side. FOCUS road bikes are using 142 mm widths.

4. Use your FOCUS R.A.T. thru-axle.

5. If it's too hard to close the lever...

6. ...adjust the preload of the axle...

7. ...until the lever closes.
