HEARX SELF TEST KIT

hearX SELF TEST KIT

CURB-SIDE TESTING

Self test as a drive-through service

HOME TESTING

Self test for at-home testing

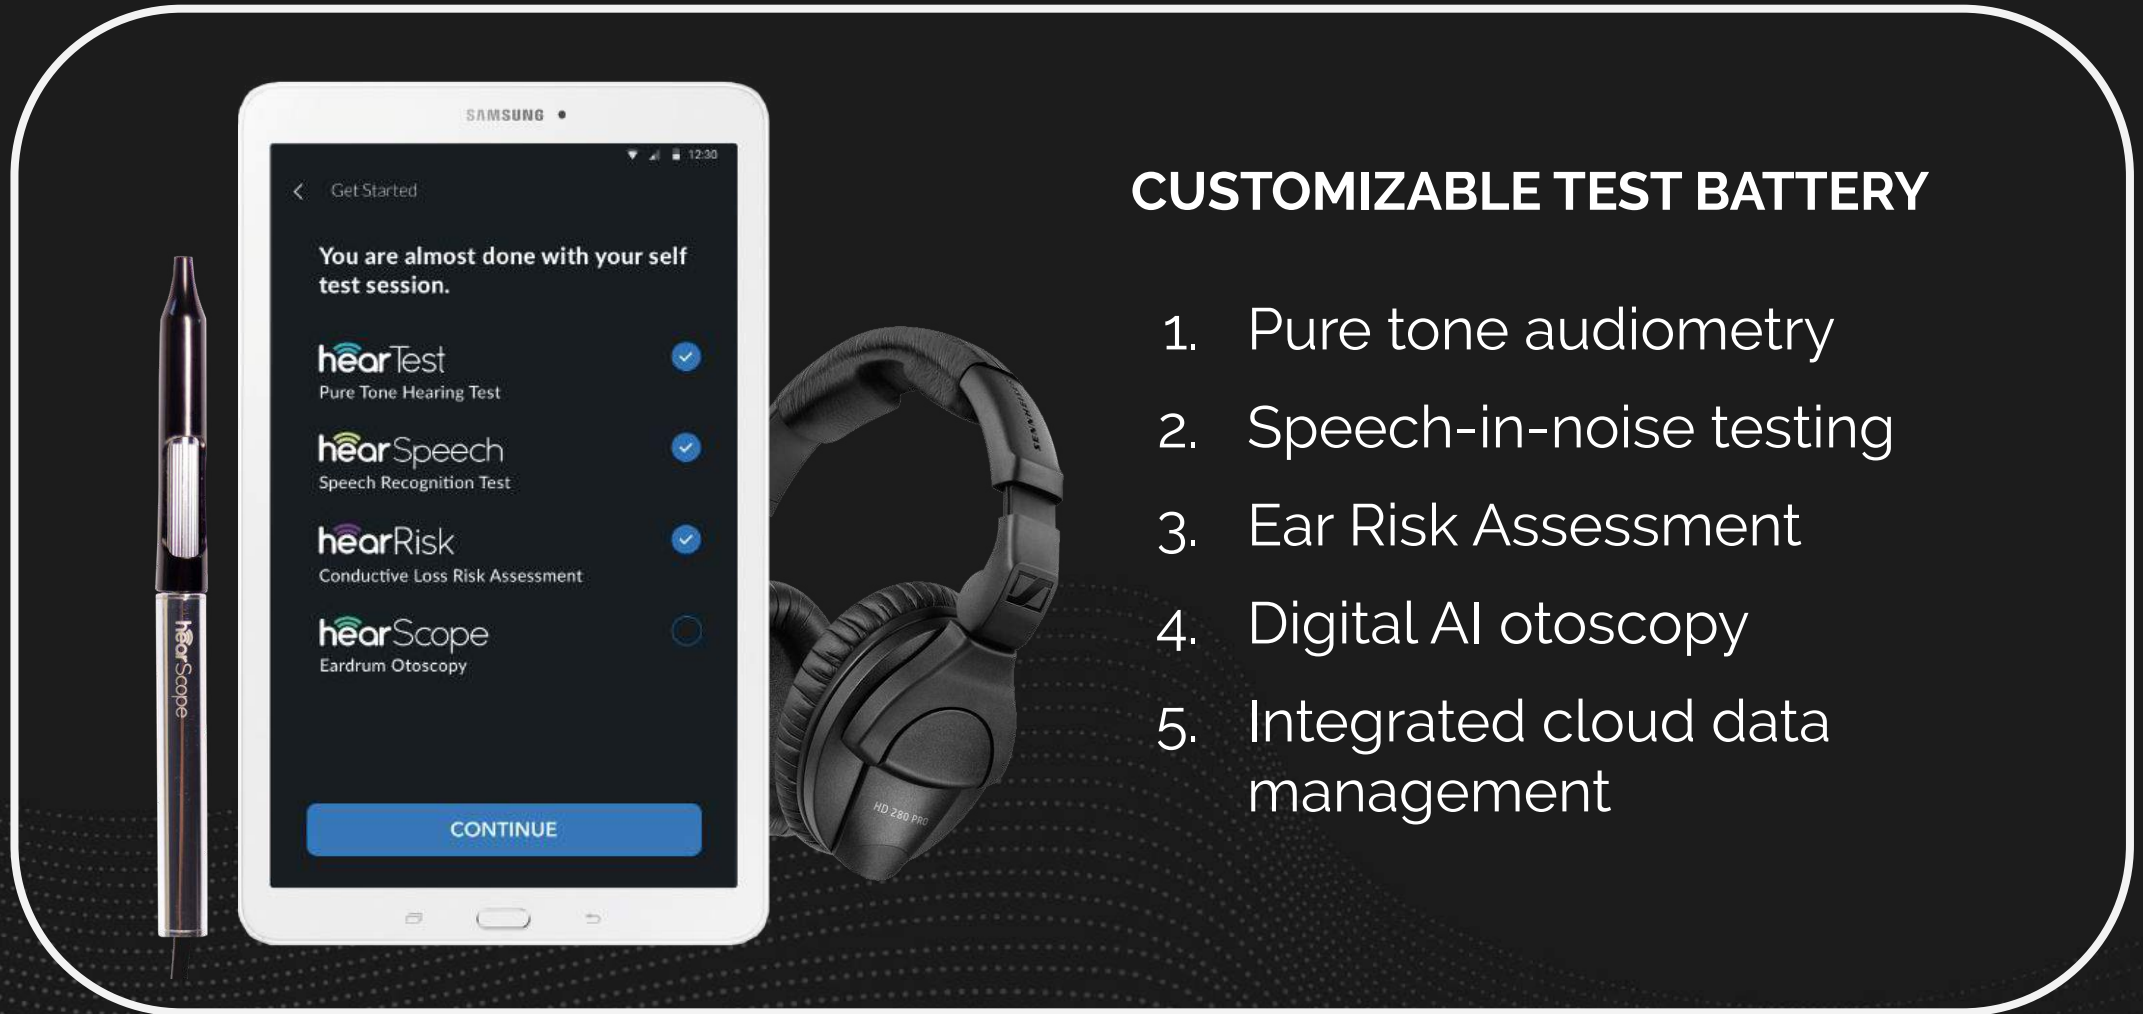

COUNTER-SIDE TESTING

Self test inside a monitored, in-store environment

hearX SELF TEST KIT

CUSTOMIZABLE TEST BATTERY

1. Pure tone audiometry
2. Speech-in-noise testing
3. Ear Risk Assessment
4. Digital AI otoscopy
5. Integrated cloud data management

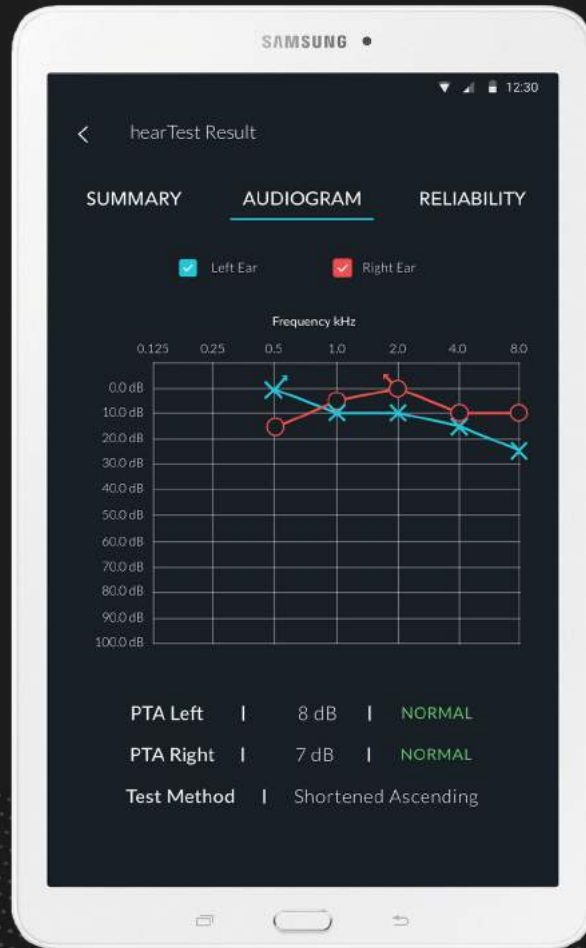

BUILDING BLOCKS OF THE SOLUTION

VALIDATED SOLUTIONS

HEARTEST - DIGITAL AUDIOMETRY

hearTest

Automated audiometry on a tablet and calibrated headphones.

Validated (Peer-reviewed papers; WHO).

Real-time tracking for noise, false-positives, response times, retest reliability check

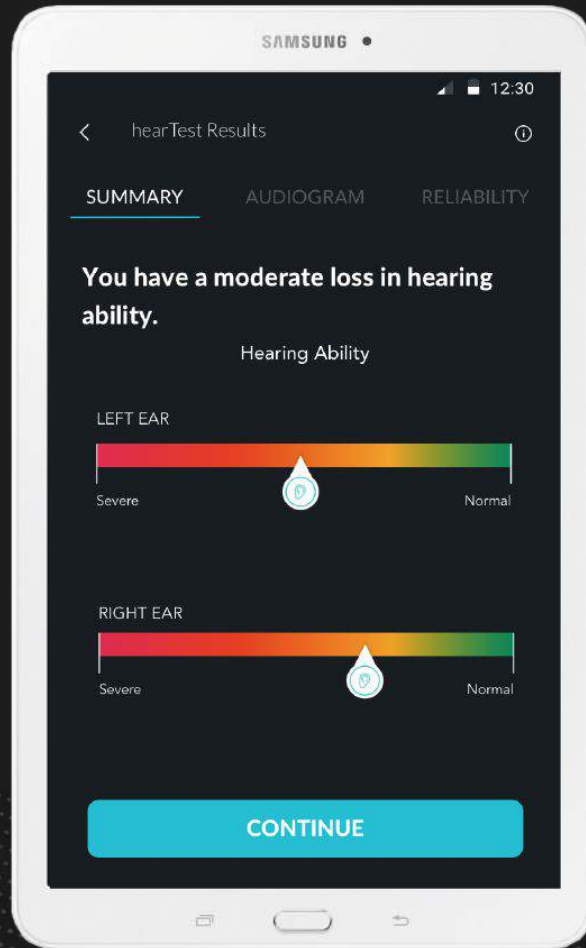

Intelligent threshold seeking: 80% time saving.

Test time: 3 - 6 mins for audiogram at 0.5, 1, 2, 4 and 8 kHz (left & right ears).

FDA and CE registered

HEARTEST - DIGITAL AUDIOMETRY

hearTest

Automated audiometry on a tablet and calibrated headphones.

Validated (Peer-reviewed papers; WHO).

Real-time tracking for noise, false-positives & response times.

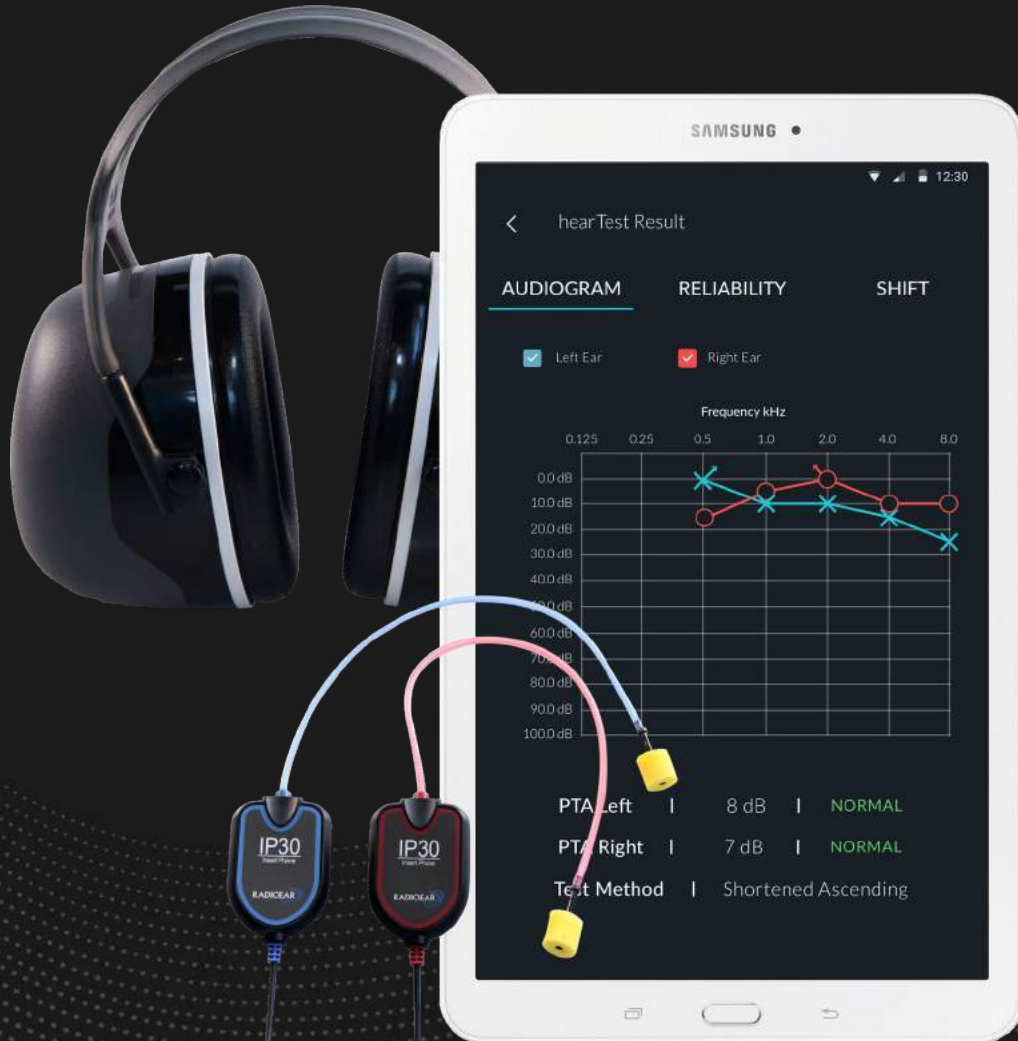

Intelligent threshold seeking: 80% time saving.

Test time: 3 - 6 mins for audiogram at 0.5, 1, 2, 4 and 8 kHz (left & right ears).

FDA and CE registered

HEARTEST - DIGITAL AUDIOMETRY

hearTest

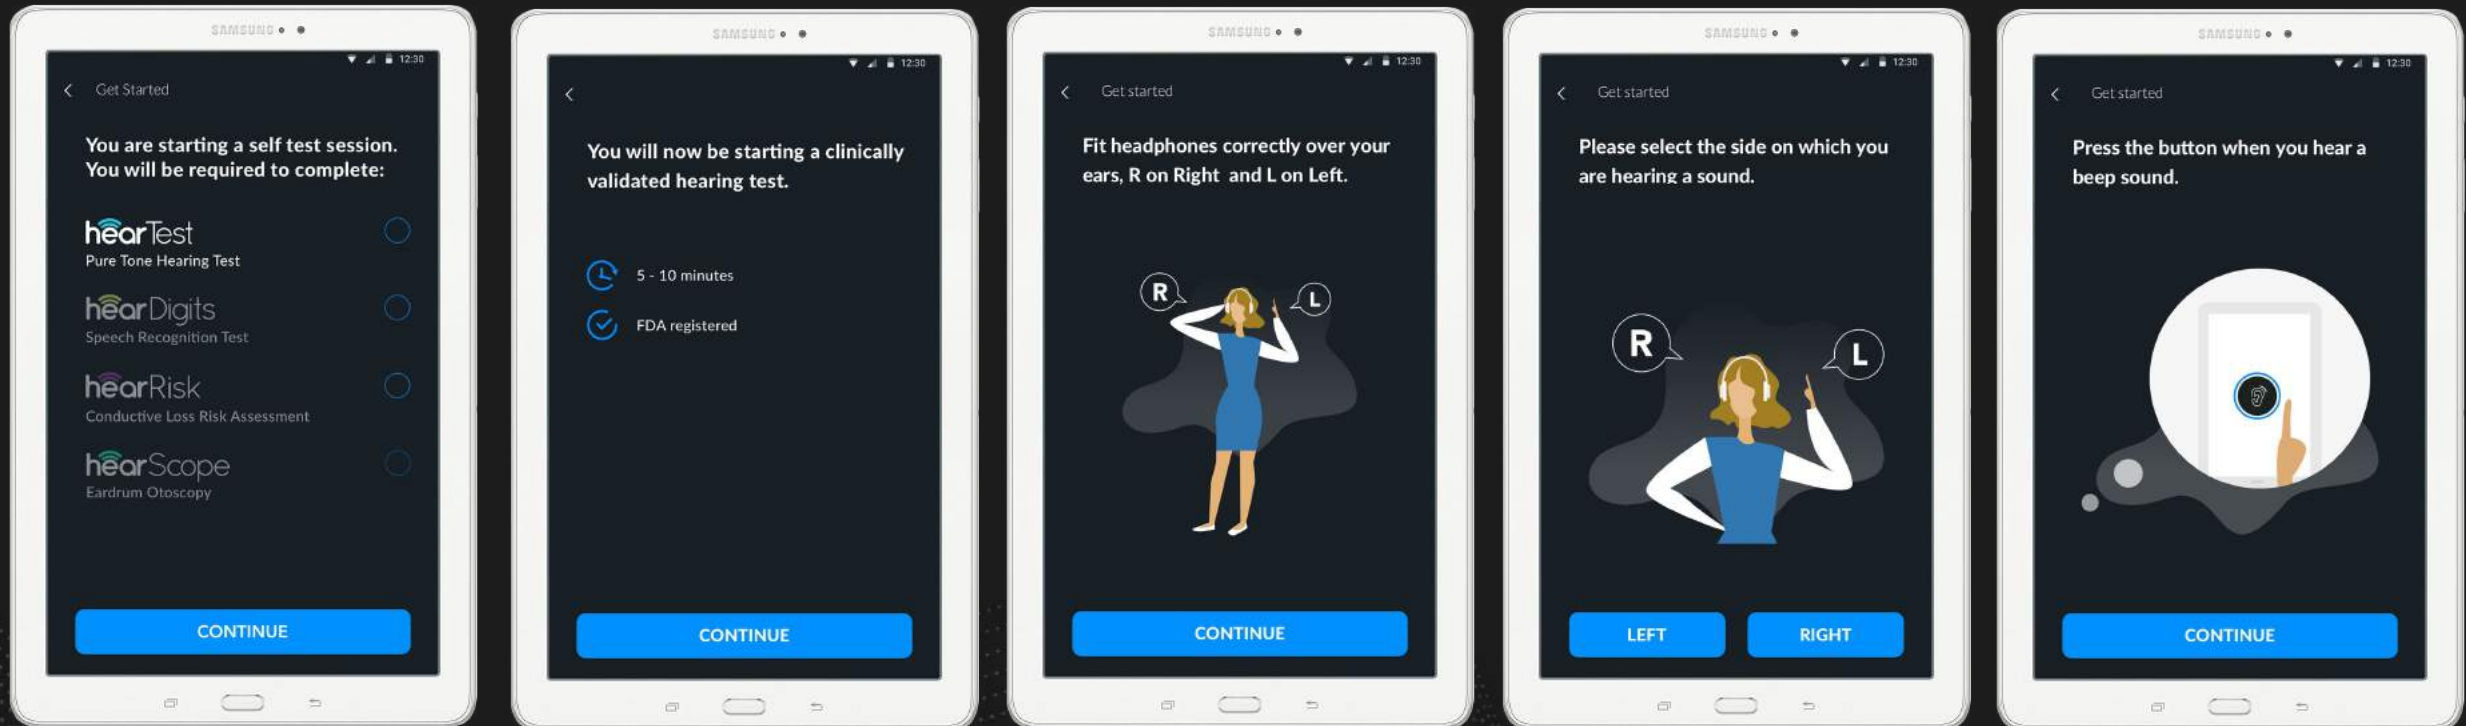

Insert headphone (with disposables) available.

Attenuation similar to a single-wall soundproof booth.

Note: Production time implications for this headset

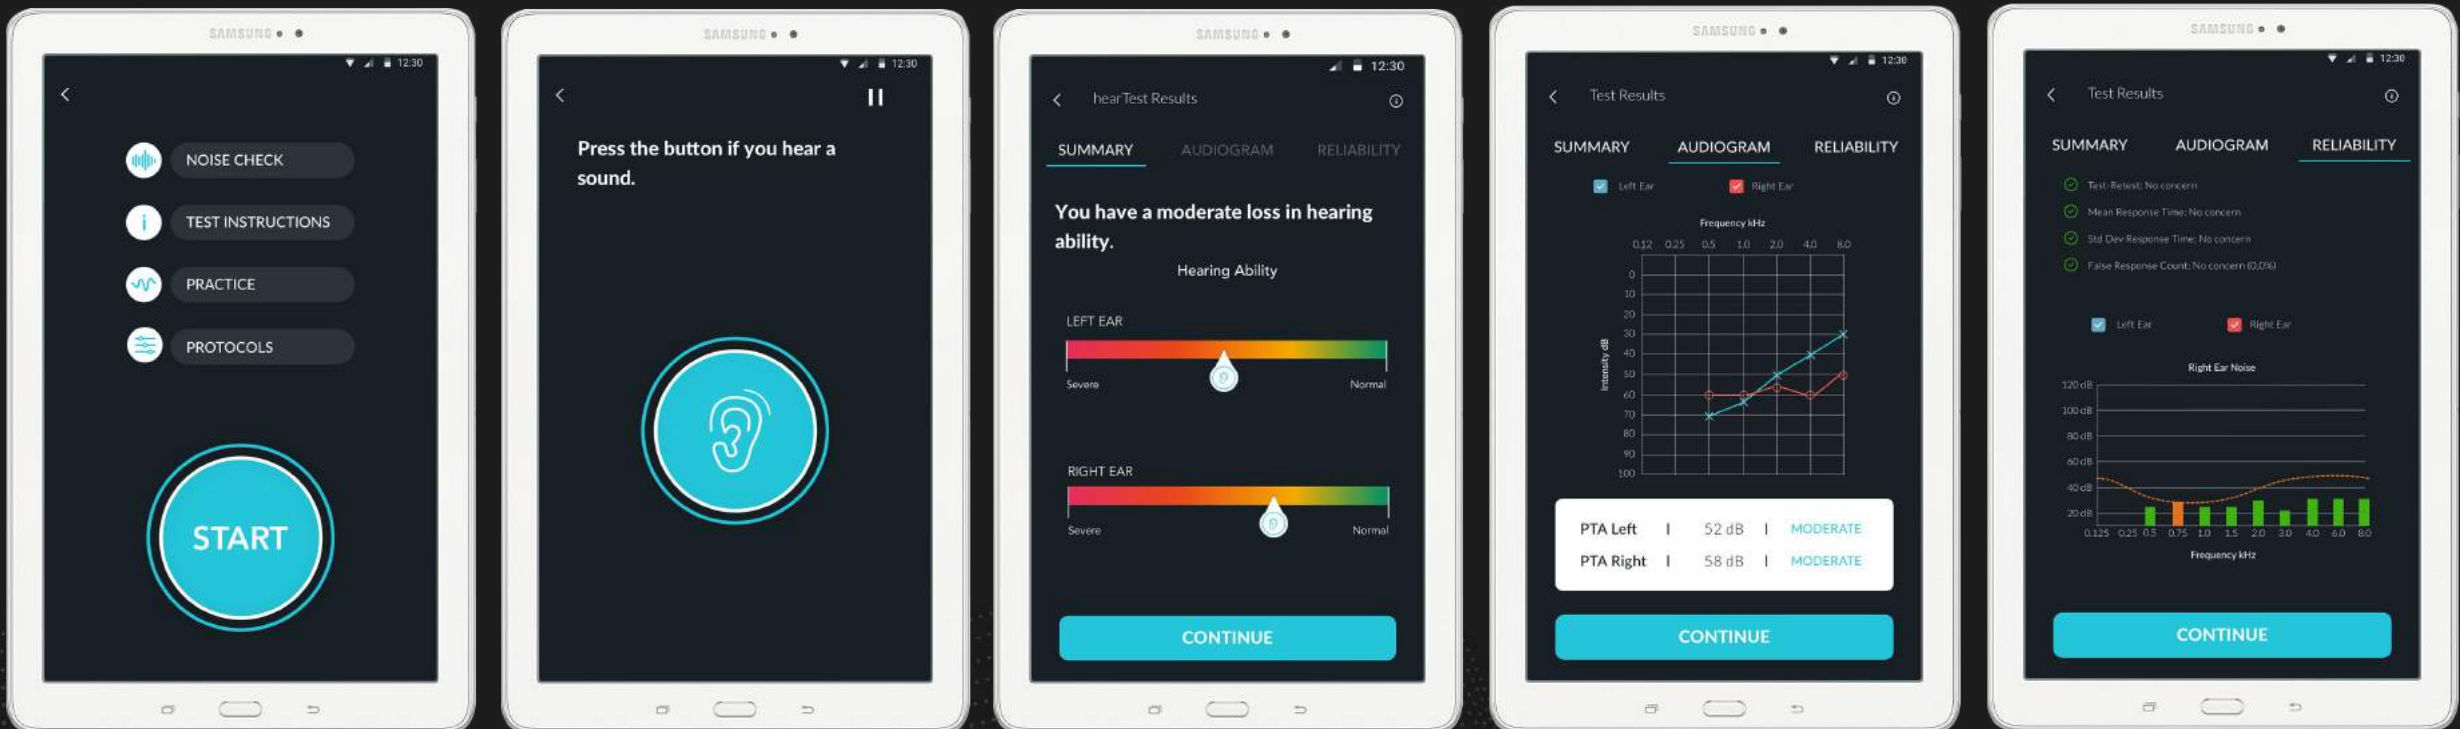

hearTest SCREENS

Software checks to see if headphones are fit correctly

hearTest SCREENS

Summary screen to interpret PTA categories

Quality control measures and noise concerns

SPEECH-IN-NOISE TEST

hearSpeech

Digits-in-noise test paradigm using antiphasic and in-phase signals.

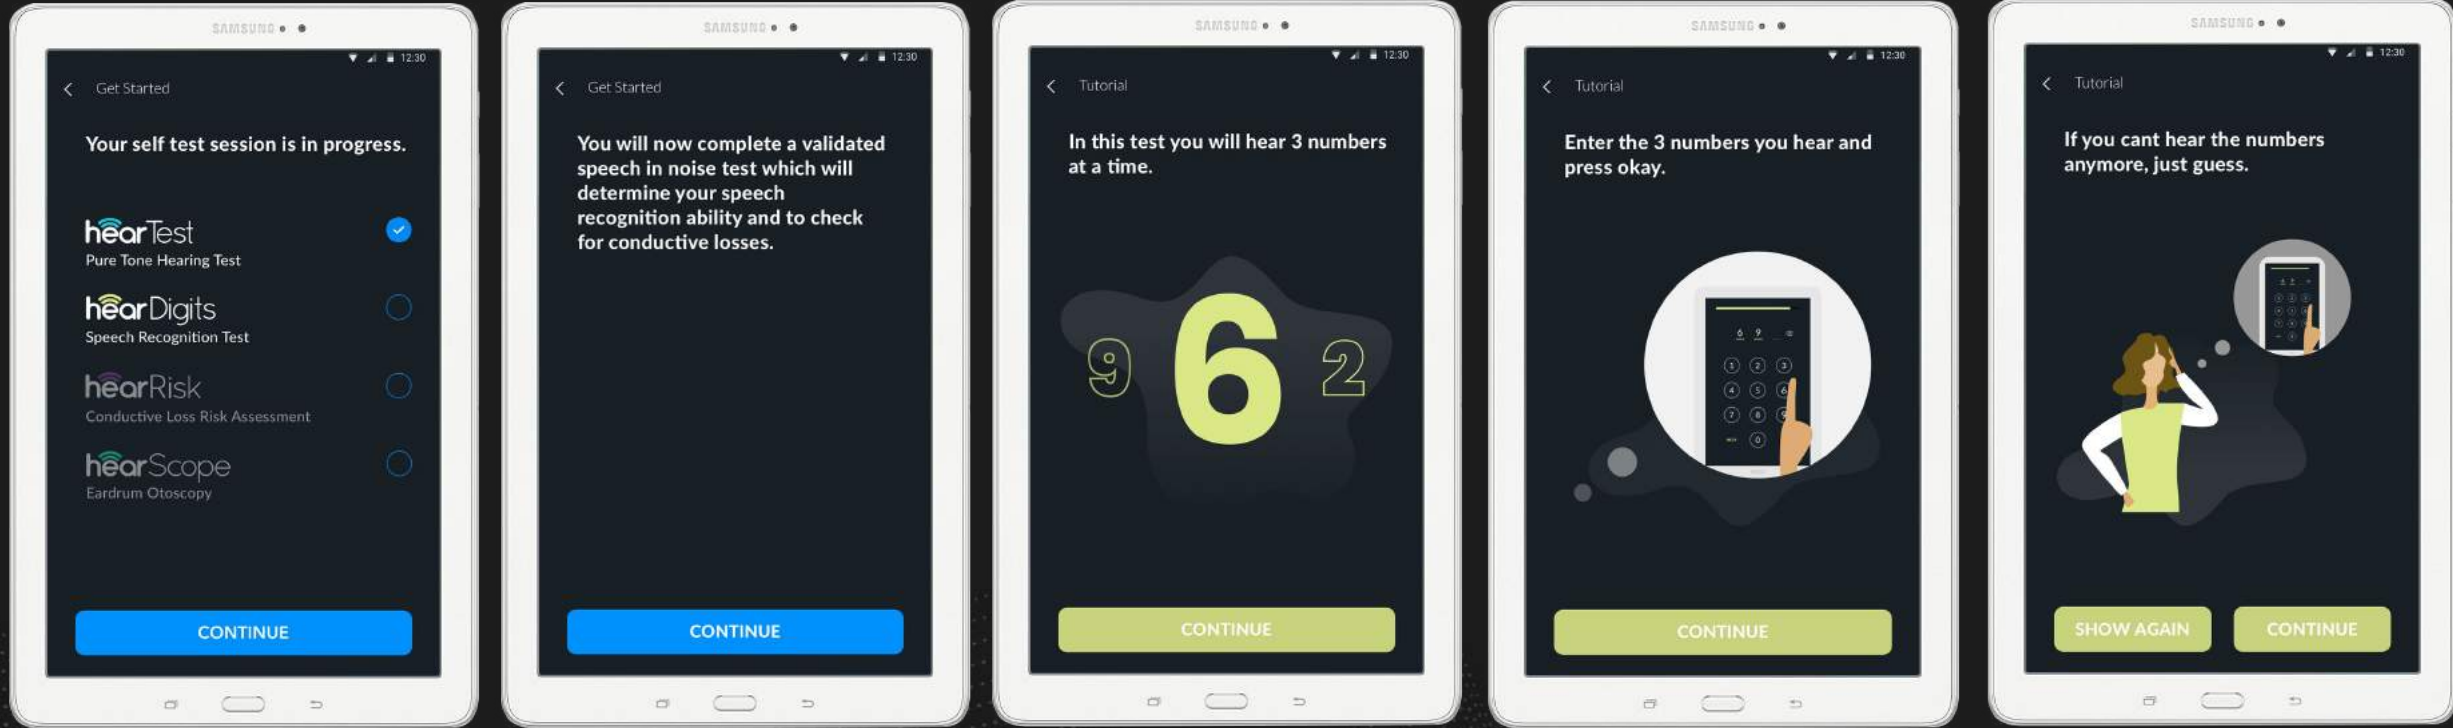

Provides speech recognition thresholds (dB SNR) and masking level difference score.

Informs counselling and managing hearing aid expectations.

Test time: 5 mins

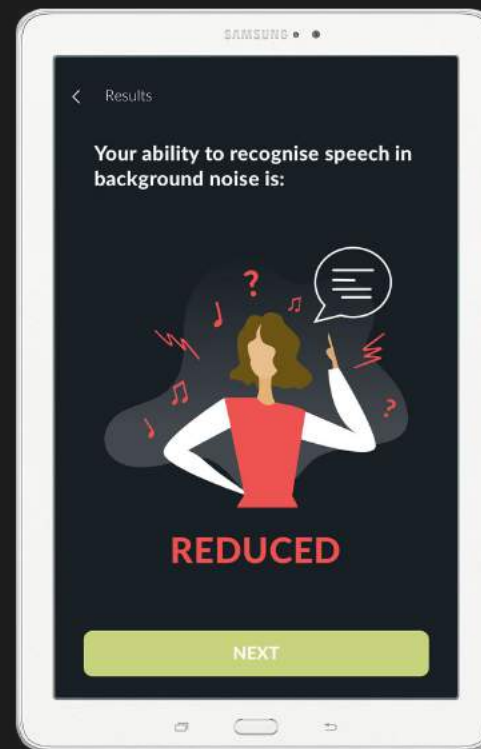

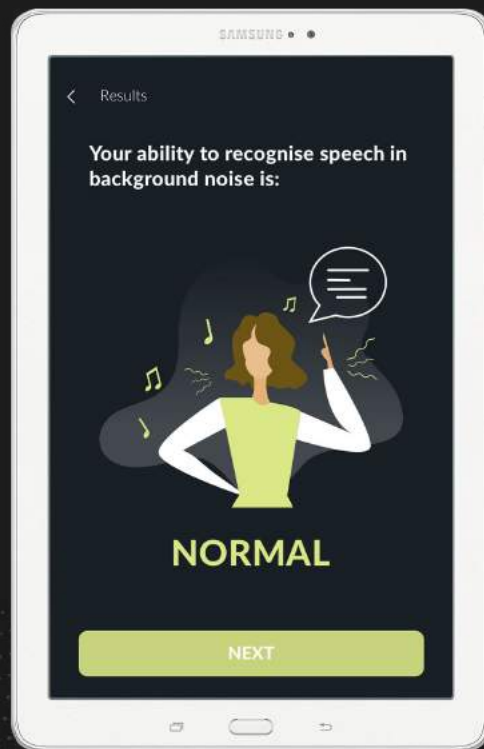

hearSpeech SCREENS

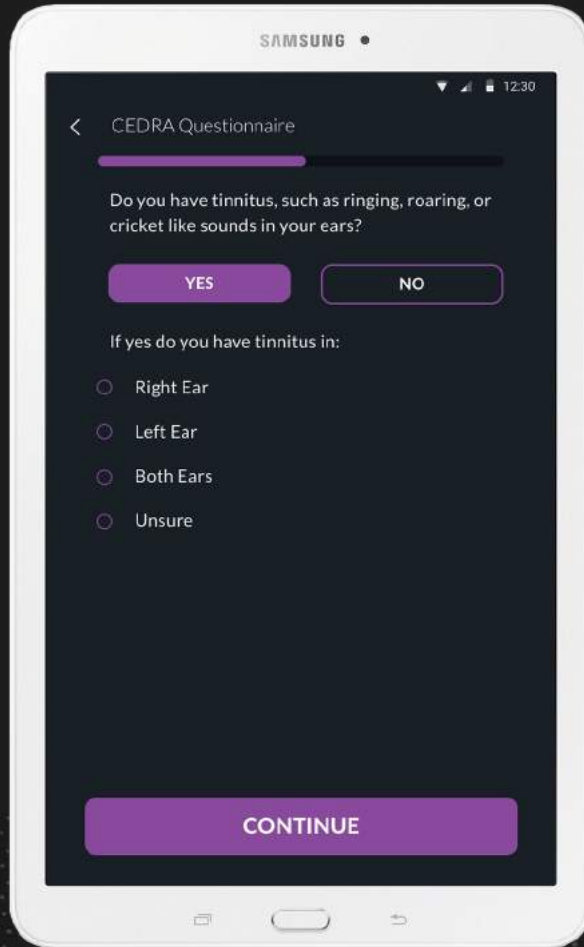

Tutorial on test paradigm

hearSpeech SCREENS

EAR RISK ASSESSMENT

The screenshot shows a Samsung tablet displaying the 'hearRisk' app interface. At the top, it says 'SAMSUNG' and 'CEDRA Questionnaire'. Below this is a progress bar. The main question is 'Do you have tinnitus, such as ringing, roaring, or cricket like sounds in your ears?'. There are two buttons: 'YES' and 'NO'. Below the question, it asks 'If yes do you have tinnitus in:' followed by four radio button options: 'Right Ear', 'Left Ear', 'Both Ears', and 'Unsure'. At the bottom, there is a large 'CONTINUE' button.

hearRisk

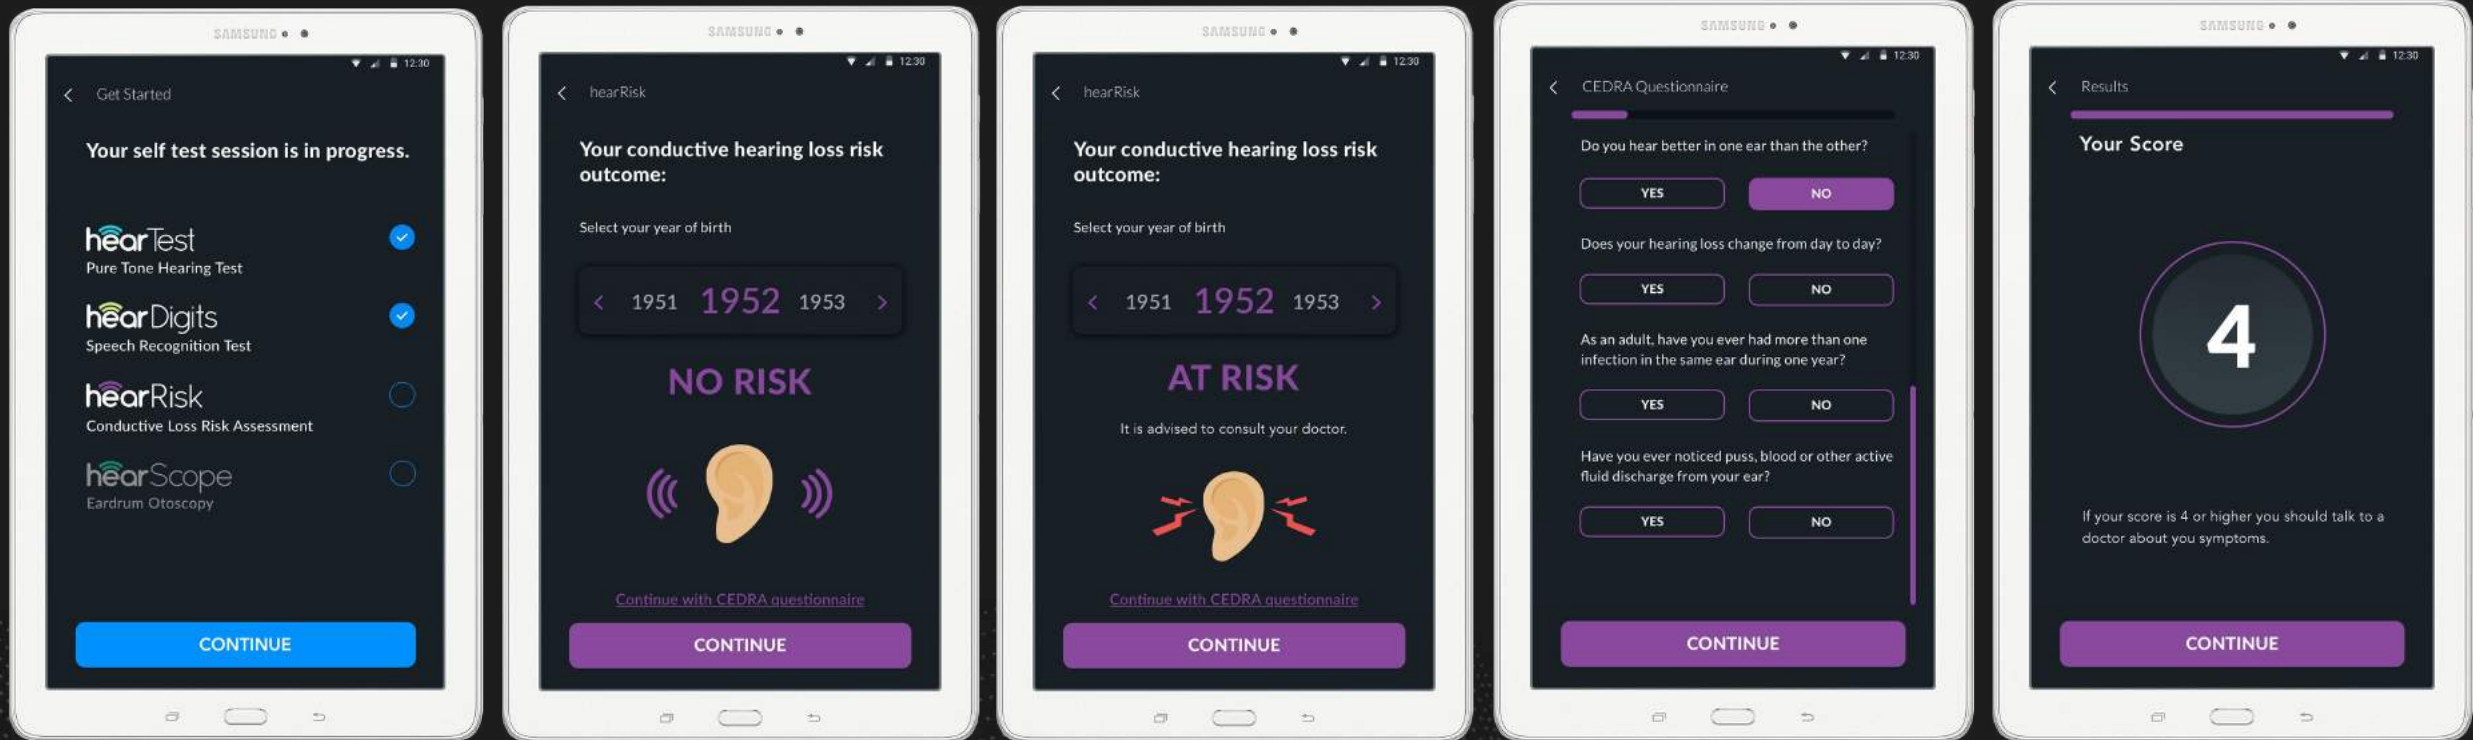

Indication of conductive loss risk **Patent pending*

Optional CEDRA questionnaire for ear disease

Test time: < 1 min
+ 5 mins (CEDRA questionnaire (optional) for ear disease)

hearRisk SCREENS

CEDRA questionnaire and score

DIGITAL AI OTOSCOPY

hearScope

Easy to use digital otoscope operated from the same tablet.

Auto-crop and auto-zoom features

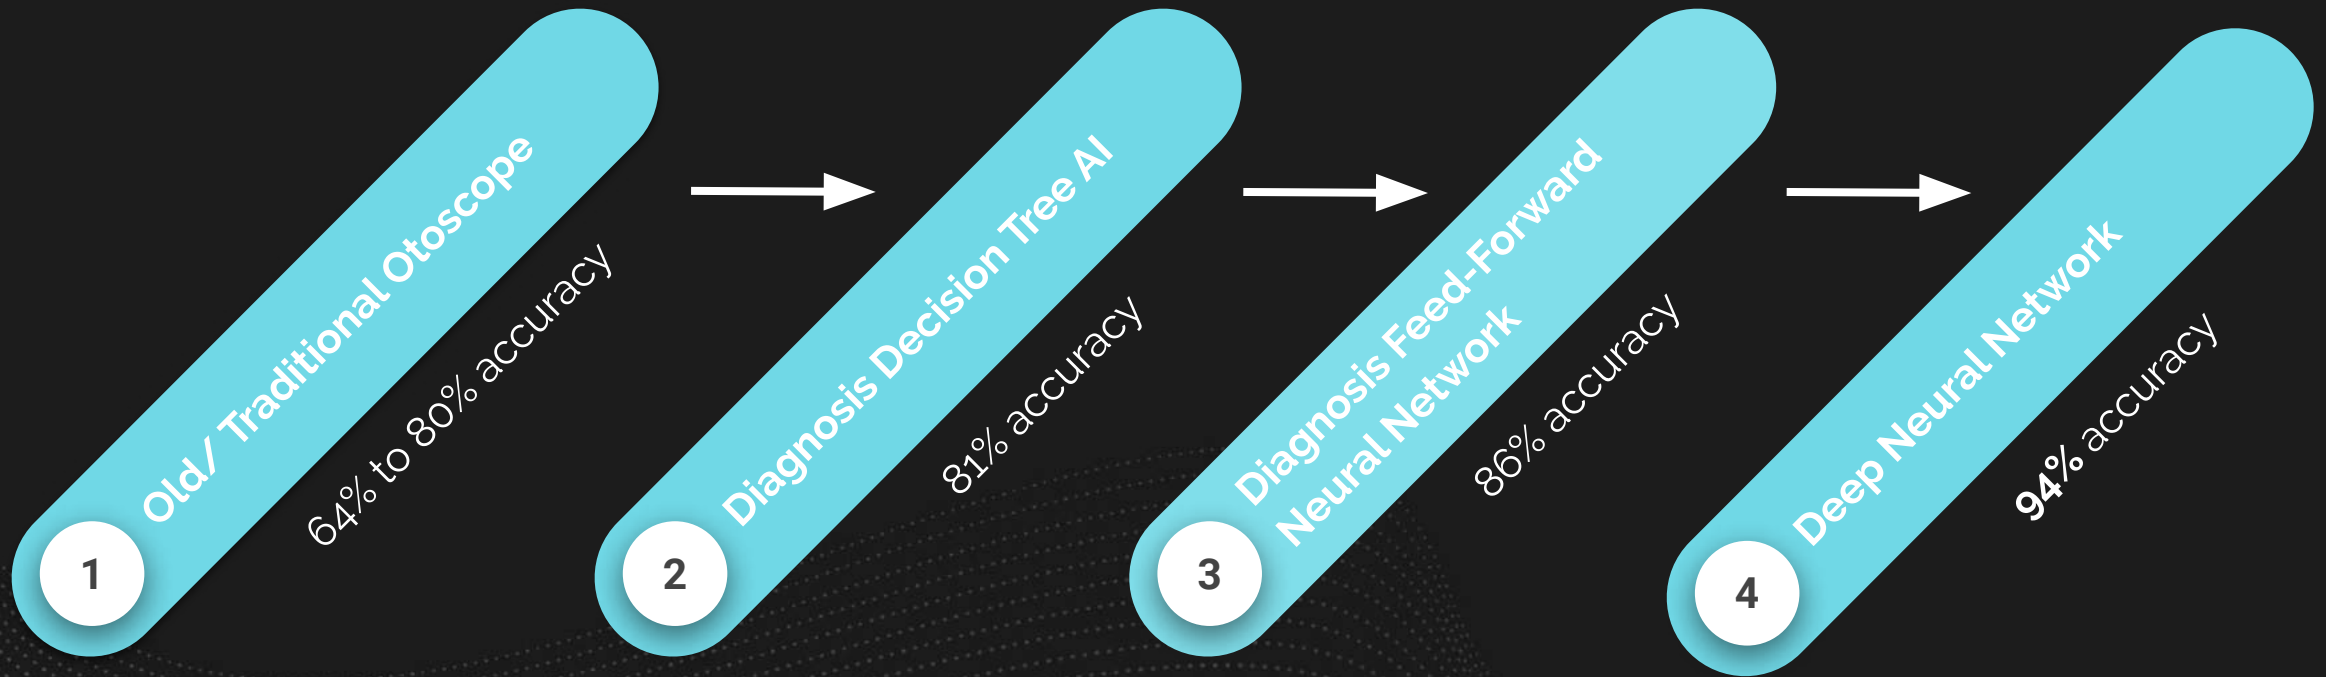

AI image classification, makes this a great remote-care tool.

94% classification accuracy: Normal, Wax obstruction, Perforation and Abnormal

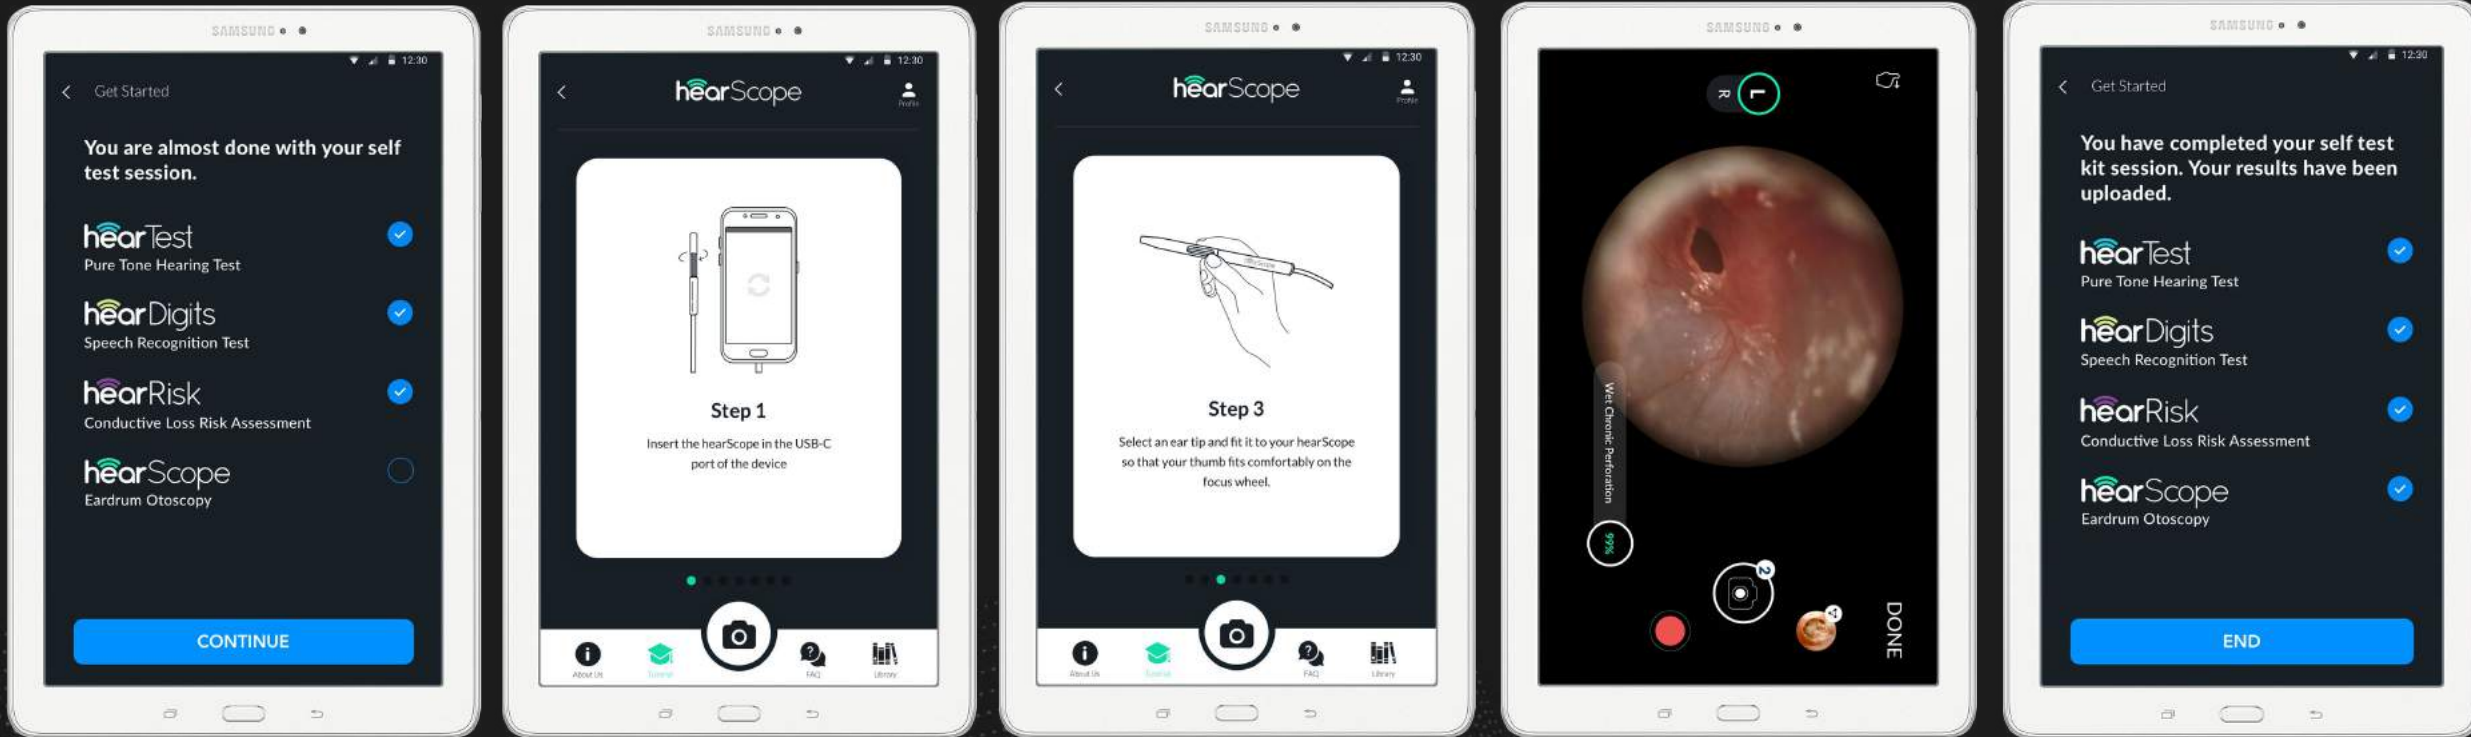

Test time: 2 min

DIGITAL AI OTOSCOPE - ACCURACY

hearScope SCREENS

Camera capture with AI
image classifications

DIGITAL AI OTOSCOPE - RAPID AI

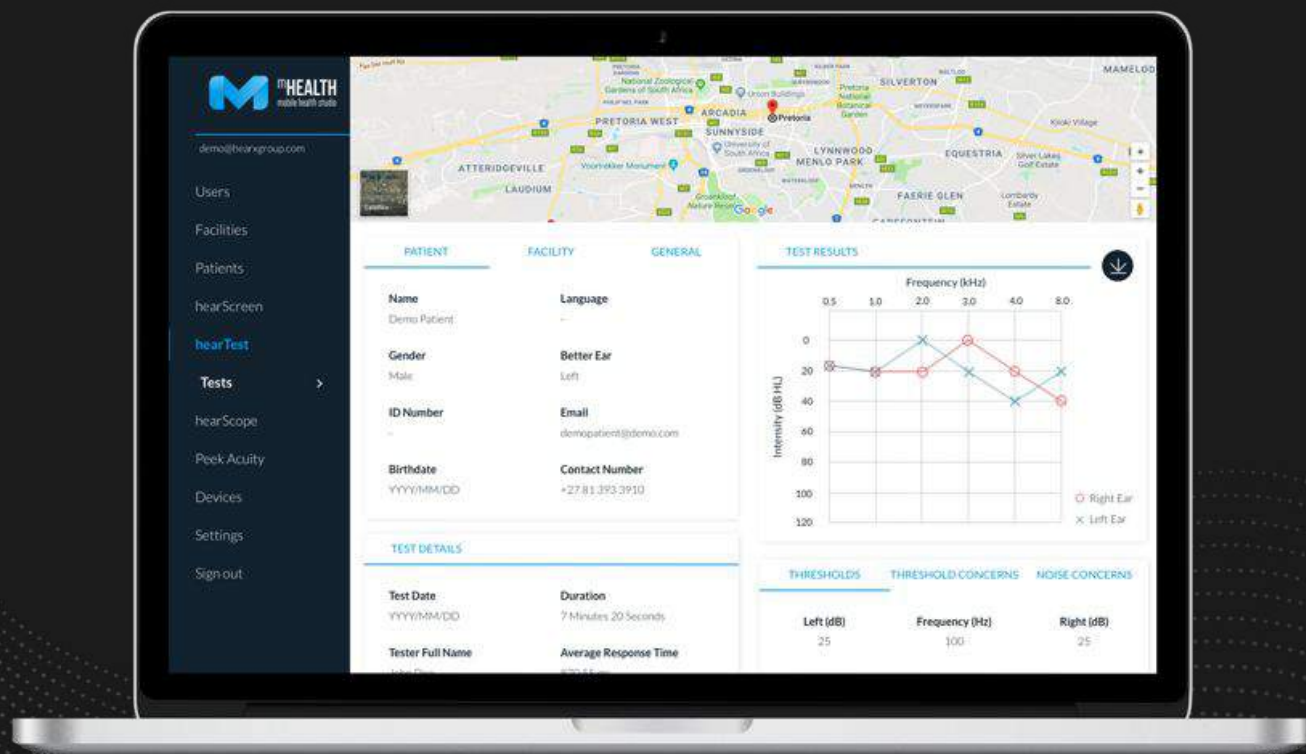

Normal

Wax Obstruction

ONLINE TEST & PATIENT MANAGEMENT

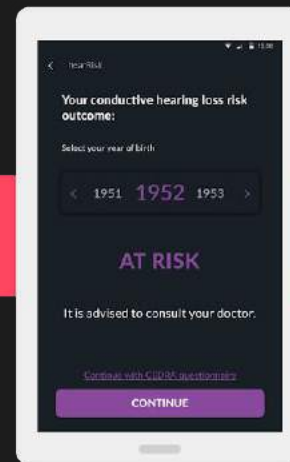

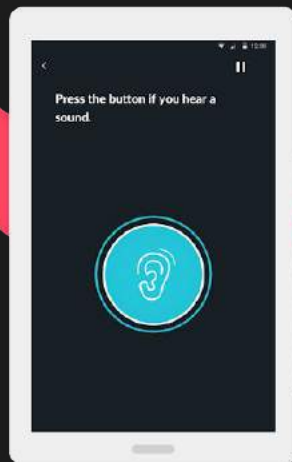

HIPAA-compliant data management tool for online, real-time viewing of customer & test information.
