Understand your audiogram

The figure depicts the sounds of daily life and locates those sounds where they typically fall relative to pitch and loudness. Letters on the graph denote common sounds of speech. Frequency (pitch) is measured on the x-axis, while sound intensity (loudness) is measured on the y-axis. Letters on the graph denote common sounds of speech. The banana shape area shows the pitch and loudness of these common speech sounds.

NORMAL Up to 25 dB HL	(
MILD 26 to 40 dB HL	
MODERATE 41 to 70 dB HL	7
SEVERE 71 to 90 dB HL	
PROFOUND (Including deafness) +91 dB HL
