ReSound LiNX Quattro™

ReSound LiNX Quattro fitting guide

A guide for professionals

GN Making Life Sound Better
First fitting with ReSound Smart Fit™

This fitting guide gives an overview of how to fit ReSound LiNX Quattro wireless hearing instruments with ReSound Smart Fit. A ReSound LiNX Quatto 961 wireless binaural fitting is depicted. Not all features described in this fitting guide are applicable for all ReSound LiNX Quattro fittings.

ReSound Smart Fit fitting software supports all ReSound LiNX Quattro, LiNX 3D and ENZO 3D hearing instruments.

Prior to connecting to ReSound Smart Fit

ReSound LiNX Quattro 61
Rechargeable ReSound LiNX Quattro hearing instruments can only be connected through wireless interface and cannot be connected with cables. Ensure that the instruments are charged prior to connection. Note that they cannot be connected while in the charger.

Insert Noahlink Wireless in a USB slot on the fitting PC and wait for the message that new hardware has been found. Then open ReSound Smart Fit.

ReSound LiNX Quattro 62
ReSound LiNX Quattro 62 hearing instruments require fresh batteries when fitting. Remove the stickers from the batteries to activate. Wait for two minutes before using the batteries for best results.

Wireless fittings: Insert a Noahlink Wireless in a USB slot on the fitting computer.
Wired fittings: Ensure that the programming interface (Speedlink, Hi-PRO USB or NOAHlink) is connected.

Launch ReSound Smart Fit. For new fittings, ReSound Smart Fit begins in the Smart Launcher.
Smart Launcher

Both ReSound Aventa and ReSound Smart Fit are contained within one software installation. The Smart Launcher will detect ReSound LiNX Quattro, LiNX 3D and ENZO 3D hearing instruments as well as ReSound Aventa legacy instruments, and then retrieve the software appropriate for the connected device.

1. For ReSound LiNX Quattro rechargeable 961, reboot the devices by placing them in the charger and removing them. Or, reboot the hearing instruments by pressing and holding the push button for 5 seconds until the LED light flashes. This indicates the instrument is ‘off’. Press and hold again until the light shows solid, meaning that is is ‘on’ again.

2. Click ‘Connect’ in the upper right of the Smart Launcher screen.
Select instruments

The hearing instruments will appear in the ‘Select Instruments’ section.
1. When the hearing instruments to be programmed have been identified, select them by checking the left box.
2. Assign the hearing instruments to the right and left ears by choosing the correct radio button for the right and left sides. When pressing ‘Beep Instrument’, the audio signal will be played and the LED will flash. It is recommended to beep the instrument for confirmation that the instrument selected in the software is in fact the instrument being used in the fitting and on the correct side.
3. Select ‘Continue’ in the lower right of the screen once the hearing instruments are selected and assigned.
Connection flow

Once the hearing instruments have been selected the connection process will begin.

1. Select instrument configuration and click 'Continue'.

2. Select physical properties of the instrument and click 'Save'.

3. Calibration of the hearing instruments is required in order to activate DFS Ultra II. Inform your patient that he or she will hear a buzzing sound and should sit still and quiet during calibration. Click 'Calibrate' in the lower right corner. When calibration is complete, click 'Continue'.

---

[Images of hearing instrument configurations and calibration process]
4. Verify connected hearing instruments. Click ‘Continue’ to proceed to the Patient Profile screen or pair Accessories by clicking ‘Accessories’.

Patient profile screen
1. Select the Patient Experience Level based on the amplification history.
2. Set the desired programs to be used in the initial fit.
3. Click ‘Fit Patient’ button in the lower right corner to move to Fitting Screen.

Note: Access to ReSound Assist can be found in the tabs under the red navigation bar on the Patient screen. ReSound Assist is defaulted ‘on’ in Smart Fit 1.3. To be active in the hearing instruments and appear in the Smart 3D app, the patient must provide consent during the fitting process.
Advanced features

Advanced feature settings can be modified by selecting the appropriate drop down menu or by moving the slider to the desired level. These feature settings apply only to the currently selected program.

**Directionality**

**Binaural Directionality III:** Leverages ReSound’s 2.4 GHz wireless technology to allow the hearing instruments to work together, dynamically selecting the best microphone response for the listening environment. Possible configurations are bilateral omnidirectional, bilateral directional or an asymmetric omnidirectional and directional response, depending on the analysis of speech and noise detectors from both hearing instruments. This provides the optimal combination of speech understanding in noise plus a more natural sense of surroundings.

**Natural Directionality II:** The Focus (directional) ear and Monitor (omnidirectional) ear are prescribed based on the audiogram and any speech audiometry data that may be available.

**Spatial Sense:** An omnidirectional microphone response which mimics the human ear’s natural response to sound, which preserves spatial cues and helps with the localization of sound sources.

**Soft Switching:** Seamlessly enables and disables AutoScope/MultiScope Adaptive Directionality™ depending on the listening environment. The response can be either omnidirectional or directional, based on whether noise is present and the direction of speech in the listening situation.

**Auto Scope:** Adaptive Directionality enables the beam width to automatically widen or narrow depending on the acoustic surroundings.

**Directional Mix**

All directional microphone modes have both omnidirectional and directional processing through the frequency spectrum. The setting determines the degree of directionality in the output of the hearing instrument(s). Directional Mix applies omnidirectional processing below a crossover frequency and directional processing above that frequency. The default setting is prescribed depending on the hearing instrument model selected and the degree of low frequency hearing loss. If the patient is still experiencing difficulty hearing in noise increasing the directional mix may help.

*Note:* Click the information icons for a short explanation of the feature. Some information text may be clickable and redirect to an in depth explanation and video.
DFS Ultra II
This is the feedback control. It is activated when the devices have been calibrated for DFS Ultra II. The default setting is Mild. Adjust the setting to a stronger level (Moderate or Strong) if concerns for feedback arise. The Music Mode setting is a Mild setting, typically used for music programs or if the patient experiences feedback only when tonal sounds occur (for example, from a musical instrument).

Noise Tracker II
Noise Tracker II noise reduction uses spectral subtraction to reduce noise between words and syllables in many real-world noisy environments. The Per Environment setting allows for personalized noise reduction settings in seven environments. The environments include Quiet, Soft Speech, Loud Speech, Moderate Speech in Noise, Loud Speech in Noise, Moderate Noise and Loud Noise, and classification is performed on a continuum if the listening situation has characteristics of more than one listening environment. If a patient is reporting specific issues such as hearing conversation in restaurants, for example, the hearing care professional can precisely increase the Noise Tracker II setting only for restaurant-like environments, including Moderate Speech in Noise or Loud Speech in Noise. This maintains the setting for other environments, permitting a great amount of fitting precision and personalization. Alternately, the Mild, Moderate and Strong settings of Noise Tracker II apply the same level of noise reduction for all listening environments, when noise is present.
Impulse Noise Reduction
Sudden impulse sounds can be uncomfortable for those using hearing instruments. Impulse Noise Reduction detects the loud impulse sound and attenuates it instantaneously. The feature can be set to three different degrees, with mild as the default setting. Increasing the setting will decrease the threshold to which the feature will react, or in other words, increase the aggressiveness. Stronger setting will also increase the amount of attenuation.

Wind Guard
Wind Guard applies noise reduction specifically for windy situations. The default setting is off. If a patient is experiencing too much wind noise, increase the setting to a stronger level. If the patient experiences the hearing aid becoming quiet occasionally in outdoor situations, reduce the setting to a milder level.

Auto DFS
Auto DFS is a feedback control setting that is activated automatically before the hearing instrument has been calibrated for DFS Ultra II. Once DFS Ultra II has been calibrated, this setting is grayed out, and cannot be reselected unless the hearing instrument has been restored to factory settings. Auto DFS is designed for use when a patient is unable to return to the clinic for the fitting, and the hearing instrument is instead shipped to the patient from the hearing care professional. It applies a mild level of feedback cancellation, but as it has not been calibrated for the patient’s ear, it may not be as effective at controlling feedback as a Mild setting of DFS Ultra II.

Sound Shaper
Sound Shaper applies proportional frequency compression to the fitting. Higher frequencies are lowered to a more usable or audible range for the patient. As patient candidacy criteria for the use of frequency lowering is based on many factors, the default setting is off. However, if the hearing care professional perceives the patient could benefit from frequency lowering, in the case of continued difficulties with speech recognition or previous success with frequency lowering features, Sound Shaper can be activated.
Low Frequency Boost
Should a patient fitted with an Ultra Power device feel that the sound is not full enough or loud enough, low frequency boost is a quick way to increase the low frequency gain from 250 – 1000Hz.

Phone Accessories
Features related to the streamed sound from a Phone Clip+, or a smart device that is capable of direct streaming, are located at the lower portion of each environmental program tab. Streamed sound will inherit the gain settings of the environmental program that is being used during the time of streaming. While the phone accessory features can be adjusted within the individual program tabs, it is important to note that settings are applied across programs, therefore phone accessory features changes made in one program will also be reflected in others. Please note when viewing Data Logging the time spent streaming from the phone will be collected within the manual program that is being used during streaming.

Environmental Optimizer II
Environmental Optimizer II allows specific gain adjustments for seven different environments, ensuring the user receives optimal gain and noise reduction settings as the acoustic environment changes. Classification is performed on a continuum if the listening situation has characteristics of more than one listening environment. With binaurally fit wireless devices the hearing instruments will optimize and synchronize the Environmental Optimizer II settings for a binaural fitting. If a patient experiences difficulty in a particular listening environment adjust the sliders to assign environment specific gains without requiring a manual program change.
Pairing wireless accessories

The Accessories screen can be accessed in the final step of the connection flow at the bottom of the fitting screen, or in the Accessories tab of the Instruments navigation item. All accessories must be charged or plugged in, and turned on during the pairing process.

1. Click ‘Add’ beneath the accessory to be paired.

2. Once the searching pop-up appears, press the pairing button on the accessory with a small pointed object such as a pen tip or paper clip. Follow the pairing instructions displayed.

3. When the accessory is successfully paired, the accessory image will appear in color. The ‘Add’ button will change to a ‘Remove’ button.
Fitting screen

On the Fitting screen, adjustments can be made to gain, advanced features, and more.

1. Gain adjustments can be made to one or several frequencies by selecting frequencies between 250 Hz and 8,000 Hz on the gain grid and then by clicking the up and down arrows found between the right and left ear grids. Gain can be adjusted for soft, average, and loud input levels which alters the average compression ratios noted above the MPO.

2. Access to advanced features and instrument controls is also found on the Fitting screen. The tabs below the red navigation bar will provide access to these tools.

3. Additional tools and features can be found in the upper right menu.

4. Programs are listed in the program tabs. Select the ‘+’ to add additional programs. Program tools can be found in the tab on the far right.

5. Click the ‘Save’ button to save the fitting to hearing instruments and in the software.

6. Wireless accessories can be paired both outside and inside the software. To pair inside the software select ‘Pair Accessories’ to access the accessories screen. Be sure that the accessory is charged or plugged in, and turned on during the pairing process.

7. For LiNX Quattro Rechargeable RIE 61, the power level of the hearing instrument batteries is displayed in the collapsible sidebar. The green dots indicate the amount of charge left in the devices, as also shown on the charger itself.
Completing a follow-up fit with ReSound Smart Fit

**Prior to connecting to ReSound Smart Fit**

Rechargeable hearing instruments can only be connected through wireless interface and cannot be connected with cables. Ensure that the instruments are charged prior to connection. Note that they cannot be connected while in the charger.

Insert Noahlink Wireless in a USB slot on the fitting PC and wait for the message that new hardware has been found. Then open ReSound Smart Fit. It is not possible for Noahlink Wireless to connect to hearing instruments that are actively connected to a smart device via Bluetooth. Ensure that the hearing instruments do not have an active Bluetooth connection to a smart device. This can be done by having the user turn off their smart device or disable the Bluetooth during the visit. If an active connection to Bluetooth is detected, ReSound Smart Fit will provide a reminder to deactivate the connection with the smart device.

Launch ReSound Smart Fit. For follow up fittings, the software that was used in the previous fitting will launch.
Upgrading a patient from legacy hearing instruments to ReSound LiNX Quattro

ReSound Aventa

If the patient has an existing hearing instrument fit in the latest version of ReSound Aventa, then ReSound Aventa will open when you begin a new fitting.

1. Click the ‘Go to Smart Fit’ button in the left navigation panel to close ReSound Aventa and arrive at the Smart Fit Launcher.

2. Follow steps in the ‘First Fitting’ section of this guide

ReSound LiNX Quattro hearing instruments cannot be fit using ReSound Aventa software.

Note: To transfer from a previous fitting to a ReSound LiNX Quattro fitting, select ‘Use Session’ in the fitting data mismatch screen of the connection flow. To start a fresh fitting choose ‘Reset to Initial Fit’. 
Connecting during a follow-up

When returning for a follow-up visit the software will open to the last saved session. Depending on the saved preferences, the session will open to either the Patient Profile screen or the Fitting Gain Adjustments screen.

1. For ReSound LiNX Quattro rechargeable 961, reboot the devices by placing them in the charger and removing them. Or, reboot the hearing instruments by pressing and holding the push button for 5 seconds until the LED light flashes. This indicates the instrument is ‘off’. Press and hold again until the light shows solid, meaning that is is ‘on’ again.
2. Click ‘Connect’ in the collapsible side bar panel.
3. The hearing instruments will appear in the ‘Select Instruments’ section. When the hearing instrument to be programmed has been identified, select it by checking the left box.
4. The hearing instrument that has already been programmed for this patient will already be assigned to the right or left side. When the other instrument is selected, it will automatically be assigned to the opposite side. Click on ‘Beep’ to confirm each hearing instrument selected is assigned to the correct side.
5. Click ‘Continue’ in the lower right of the screen once the instruments are selected and assigned.
6. Continue to connection flow and follow steps in the ‘First Fitting’ section of this guide.

Replacing one hearing instrument in a pair

**Note:** To transfer settings from a previous session to the to replaced instrument, select ‘Use Session’ in the fitting data mismatch screen of the connection flow. To start a fresh fitting choose ‘Reset to Initial Fit’.
How to Complete a ReSound Assist Fine-Tuning

This section provides an overview of how to perform a remote fine-tuning adjustment with ReSound Smart Fit fitting software and the ReSound Smart 3D app.

Getting Started
Connect hearing instruments to the ReSound Smart Fit software. For further assistance, refer to page 3 of this guide. From the Patient Profile screen, sign in to GN Online Services.

GN Online Services
In order to sign in, the hearing care professional must be a registered user of GN Online Services.

1. Enter the username and password assigned to the hearing care professional to login to GN Online Services.
2. After login, the name of the hearing care professional will appear in the upper right corner of the fitting screen.

For more information on GN Online Services, see the GN Online Services Guide.
ReSound Assist Remote Fine-tuning

1. From the Patient screen, click ‘ReSound Assist’ from the lower navigation row.
2. Remote Fine-tuning and Remote Hearing Aid Updates are defaulted ‘On’. Patient consent must be completed before requests can be completed.

Select Patient Consent from Menu

To utilize ReSound Assist, the patient must complete a one-time consent form before becoming eligible to receive Remote Fine-tuning or Remote Hearing Aid updates.

1. Click on the ‘Menu’ button below the hearing care professional’s name.
2. Click on the ‘Patient Consent’ option to begin the consent procedure.
Activate Consent

1. Click ‘Start Consent’.

2. Click ‘Agree’ on each page of the consent process.

3. Enter the patient’s name and email address. Click ‘Continue’ to send a copy of the consent agreement. Should the patient not have an email address, the hearing care professional’s email address may be used. Use the ‘Print Consent’ button to print a copy for the patient. Keep a signed copy in the patient’s record.
Move Cloud Icon to Taskbar

The orange cloud icon should be visible in the taskbar so that the hearing care professional is notified when requests for assistance are received. If it is not already visible then:

1. Click on the upward arrow in the taskbar in order to view the hidden icons.
2. A window will appear which contains the orange cloud icon for GN Online Services.
3. Click and drag the cloud icon to the taskbar.
4. The cloud icon will now appear in the taskbar as shown.
Receiving an Assistance Request from a Patient

Notification of Assistance Request
1. The number of requests received will appear in the cloud icon in the taskbar.
2. Click on the cloud icon to open the GN Notifications box. A list will appear if more than one request is received.
3. Click on ‘New Request’. The options to either ‘Open Smart Fit’ or ‘Remove from List’ will appear.
4. If ‘Remove from List’ is selected, the request is deleted from the Notification Tray, but will still appear on the Patient’s Timeline in ReSound Smart Fit.
5. Click on ‘Open Smart Fit’ to go directly to the Timeline within ReSound Assist for that particular patient.

You will also receive email notifications for ReSound Assist requests for patients assigned to you in GN Online Services. To deactivate email notifications, go to the Patient section in GN Online Services.
Starting a ReSound Assist Fine-tuning Session from the Timeline

1. The Assistance Request will now appear on the patient’s Timeline in the ReSound Assist screen.
2. Click on ‘Actions’.
3. Click ‘Start an Assist fine-tuning session’ or ‘Close Request’.
4. If starting a fine-tuning session, a pop-up message will appear stating the selected session will be used as the starting point for the Assist session. Click ‘Ok’ to continue.

View Patient’s Assist Questionnaire

There are two ways to view the Assist Questionnaire sent by the patient via the ReSound Smart 3D app:

1. Click the ‘Assist Questionnaire’ box beneath the Data Logging box in the Sidebar. This will expand the questionnaire and enable it to be moved around the fitting screen during fine-tuning adjustments.
2. Click the ‘Assist Questionnaire’ which will appear after “Message from patient” in the Assistance Request on the Timeline. This will expand the questionnaire for viewing.
**View Patient’s Preferred Settings**

Click the ‘On’ toggle to View Patient Settings at the bottom right of the Fitting screen. This will enable viewing of the patient’s preferred settings in the app.

1. In the Gain Adjustments screen, the patient’s preferred settings are represented as green symbols.
2. In the Advanced Features screen, the patient’s preferred settings are represented as gray dots.
3. Fitting adjustments can be made from this information as well as from the Assist Questionnaire. (See previous section: View Patient’s Assist Questionnaire)
4. After making necessary adjustments, click ‘Save’ in the lower right corner of the Fitting Screen.
Prepare to Send Package

1. After saving in the Fitting screen, a message will appear stating that the current fitting session has been saved.
2. Click ‘Send Settings’ in the lower right corner.
3. A free text screen will appear. This allows the hearing care professional to compose a message to the patient. A summary of the changes can be included if desired. Click ‘Send Settings’ again.
Confirmation of Settings Sent

1. After sending the new settings to the patient, a message will appear stating “Settings successfully sent.”
2. A summary of actions can be viewed in the patient timeline.

Settings successfully sent - ①

Closing the Assistance Request

After sending the settings, visit the patient timeline to close the request. The patient is allowed a maximum of five open requests in the ReSound Smart 3D app. Only the hearing care professional can close them.

1. Go to the Assistance Request on the patient’s timeline.
2. Click on ‘Actions’.
3. Click ‘Close Request’.
4. Enter a message for the patient and a reason for closing the request. Click ‘Send’.

ReSound Assist requests can also be closed from the Patients section in GN Online Services.
Sending a Remote Fine-tuning without an Assistance Request

The hearing care professional can send a Remote Fine-tuning package to a patient without having received an Assistance Request.

1. Access the patient fitting screen.
2. If you haven’t already, login to GN Online Services.
3. Follow the standard fitting procedure.
4. Save the fitting.
5. Choose ‘Send Settings’ on the Save screen as outlined in the previous section.

The patient will receive the package in the ReSound Smart 3D app and the Remote Session will appear on the patient’s timeline.

Viewing patient’s rating

1. Once a fitting or fine-tuned settings have been rated by the patient, an email notification will be received.
2. The rating can be viewed within the ReSound Assist timeline. When a new assistance request has been sent along with the Rate my sound rating, the new request will appear as the latest action in the timeline and the rating will be found below it.
3. If the hearing care professional would like to generate a new set of fine-tuned settings at this time, follow the steps in “Starting an Assist fine-tuning session from the timeline” section of this document.
Like you, we place people with hearing loss at the heart of everything we do. Together we can create a world where more people with hearing loss successfully adapt to a life with hearing instruments – one that makes them feel more involved, connected and in control. ReSound® empowers people to hear more, do more and be more than they ever thought possible.

ReSound is part of the GN Group – pioneering great sound from world-leading ReSound hearing instruments to Jabra office headsets and sports headphones. Founded in 1869, employing over 5,000 people, and listed on NASDAQ OMX Copenhagen, GN makes life sound better.
