Description
Quick Saw cable for cutting PVC pipe is great for cutting PVC pipe in hard-to-reach places. The Quick Release Handle allows you to remove one handle and position cable blade around PVC pipe in hard to reach areas for a fast, easy cut. Economical Quick Saw Replacement Cables are available.

Directions
1. Secure PVC plastic pipe firmly for cutting. Loop cable around pipe at the spot to be cut.
2. Applying pressure, make short back and forth strokes to establish a starting cut or pilot groove in the pipe.
3. Then, using the middle third of the cable, make longer strokes to completely cut through the PVC pipe.
4. Snap cable blade to clean out and straighten after use.
5. After PVC pipe is cut, cable blade and cut edges of pipe may be hot for approximately 10 seconds. Avoid contact with these areas until cool. Also raw cut edges may be sharp or jagged. Use care in handling to avoid injury.

Applications
Use Quick Saw between joist pipes, for buried pipes or around closet flanges.

Characteristics | Features
• Detachable handles for hard-to-reach cuts
• Contoured handles for easy grip
• Replacement cables available
