NOTE: DO NOT USE SEPARATE 115 VOLT OUTLET TO POWER PUMP AS THIS IS NOT FAIL
SAFE AND MAY CAUSE AN OVERFLOW!
1. Check voltage at evaporator and ensure that pump voltage is correct.
2. Install 1 amp inline fuse between evaporator and pump to protect pump and unit.
3. Connect pump power wires to terminal 1 & 2 in evaporator as shown on diagram. This will ensure
   that pump is powered only when evaporator has power. No ground is required. DO NOT CONNECT
   RED WIRE TO TERMINAL 3.
4. To wire overflow switch, connect red wire from condenser (3) to gray (common) wire from pump with
   wire nut as shown in diagram.
5. Connect purple wire (normally closed) from pump directly to terminal 3 in evaporator as per diagram.
6. Attach warning label provided to front face of terminal cover in indoor unit.

NOTE: OVERFLOW ALARM WIRE MUST BE CONNECTED TO ENSURE THAT IN CASE OF
PUMP FAILURE OR BLOCKAGE IN DISCHARGE HOSE, EVAPORATOR WILL SHUT DOWN.
CONNECTION OF THE OVERFLOW ALARM CIRCUIT IS MANDATORY AND
FAILURE TO DO SO WILL INVALIDATE PUMP WARRANTY!
