PRODUCT INFORMATION: MicroSolutions Corn Mix II is intended for the prevention and/or correction of copper, manganese and zinc deficiencies. It can be applied alone or in combination with compatible agriculture chemicals or liquid fertilizers, including those containing 100% orthophosphate and suspensions.

DIRECTIONS FOR USE: Use in accordance with recommendations of a qualified individual/institution. Do not allow to freeze. Corn Mix II is compatible with many crop protection products as a tank mix partner. The Andersons recommends a compatibility (jar) test before field mixing and application. Always read and follow all individual product labels before use. For more information, visit AndersonsPlantNutrient.com/Tank-Mix.

Soil Application: Apply in-furrow, 2x2, or at sidedress or topdress. Use caution when applying on seed in alkaline, saline, or coarse textured soils.

Foliar Application: Fill spray tank with water prior to adding fertilizer or other products. Use only as a supplement to a regular nutrient management program. Repeat applications may be beneficial. Use only as directed to avoid foliar burn. Do not apply when crop is excessively stressed for moisture or during periods of high temperatures. Use of a surfactant may enhance leaf coverage and increase nutrient absorption.

RECOMMENDED RATES: This product should be used on the basis of a soil and/or tissue analysis. Suggested application rates are for one growing season (gallons per acre) in the absence of soil and/or tissue analysis.

	Application	Use Rate (per acre)	Timing
Corn	Soil (broadcast)	2-3 gallons	Before planting
	Soil (2x2)	2-8 quarts	
	Soil (in furrow)	1-2 quarts	At planting
	Foliar	1-2 pints	V5-V6

STORAGE: Store in fiberglass, stainless steel, or poly tanks. Do not store in carbon steel tanks. All forms of copper react with carbon steel. This reaction could cause red or black copper to drop out, decreasing the copper analysis.

pH: 7.4 | Salt Out: 8°F
