

Season Pass® WITH MICROCARB®

Season Pass® with MicroCarb GoldStart® features essential nutrients and fulvic acid to maximize early season growth. The addition of fulvic acid increases soil cation exchange capacity, improving nutrient availability. The use of Season Pass with MicroCarb GoldStart encourages quicker crop emergence, growth, crop maturity and dry down.

FEATURES & BENEFITS

- **80/20 ratio of ortho-to-polyphosphate**
- **Formulation contains 1 quart of MicroCarb per 5 gallons**
- **Low application rate**
- **Designed for use in all liquid fertilizers and suspensions**
- **Great for all crops**
- **Ability to lower moisture at harvest, reducing drying costs**
- **High CEC components increase the efficiency of nutrient uptake**
- **Contains a proprietary nutrient blend with fulvic acid and other carbon sources for enhanced efficiency**
- **Encourages fruit and seed formation**
- **Available carbon source promotes an increase in beneficial soil microbe population**

FREQUENTLY ASKED QUESTIONS

Q: What is the orthophosphate content for Season Pass GoldStart with MicroCarb?

A: Season Pass GoldStart with MicroCarb contains 80% orthophosphate and 20% polyphosphate. This means that 80% of the phosphorus is available to seedlings and root systems right away, even in cold and/or wet soil conditions. The remaining 20% of phosphorus will break down over time, later becoming available to the crop.

Q: Can Season Pass with MicroCarb GoldStart be foliar applied?

A: Season Pass with MicroCarb GoldStart is not limited to starter applications, it is also effective as a foliar fertilizer. Season Pass with MicroCarb GoldStart is efficient at delivering nutrients into the plant through leaf tissue without danger of burn.

Q: What is the importance of a carbon source in soil applications?

A: Organic carbon sources prolong nitrogen, phosphate and micronutrient efficiency, stimulate root growth, feed beneficial soil organisms, and increase organic matter.

Q: Can I mix liquid nitrogen with Season Pass with MicroCarb GoldStart to increase the nitrogen content?

A: No, do not add liquid nitrogen to Season Pass products or any product placed with the seed. The salt content will be too high and could damage the seed when placed in-furrow.

Q: What makes Season Pass with MicroCarb GoldStart unique in the marketplace?

A: Season Pass with MicroCarb GoldStart is a blend of 80% orthophosphate, 20% polyphosphate, essential nutrients, and carbon to encourage rapid growth throughout the season. The addition of carbon will enhance nutrient availability and uptake into the crop. Season Pass with MicroCarb GoldStart also contains EDTA chelated zinc to assist in meeting the micronutrient needs of your crop.
